Refined design, quality materials, modularity and comfort

Unleash your creativity with the elegant 100% acrylic solid surface brought to you exclusively by yanhesheng@Solid Surfaces. Imagine a material that mimics the look of natural stone, wood and other natural materials, that can be joined together invisibly, that is non-porous, requires little maintenance and can be moulded into a variety of shapes.

With over 20 years' experience in providing outstanding solid surface and stone products to the residential, commercial, retail, hospital, bathroom and healthcare industries, yanhesheng has built a reputation for unparalleled quality, an innovative "can do" attitude and customer satisfaction that is unparalleled! The only criterion for "a job well done."

yanhesheng produces, supplies and installs seamless, non-porous, solid surface materials for the commercial and domestic markets. The materials are aimed at customers with requirements for health and safety, hygiene, durability and aesthetic appeal.

yanhesheng works with building material suppliers, distributors, wholesalers, retailers, traders, interior designers, architects and manufacturers around the world to reach new creative heights with acrylic solid surface materials. Our entire product range is valued by our customers for its optimum quality and superior strength.

We have established a world-class infrastructure which includes a variety of machines based on the latest technology that supports us during production and post-production processes. Our professionals are experienced and well-trained to meet the exact requirements of our customers without compromising on quality. Our team of professional craftsmen are able to complete the complete design, engineering, manufacture and installation of your solid surface needs professionally, efficiently and in a timely manner.

Yanhesheng products are designed and manufactured at the supplier's end using international quality standards, the highest quality raw materials and the most advanced technology. Our Solid Surface product range is highly regarded by our customers for its unrivalled features such as compact design and high quality products. Durable, attractive and long-lasting.

What is a solid surface?

The solid surface consists of an acrylic resin and an aluminium oxide trihydrate filler. Thanks to their unique non-porous properties, their excellent quality is maintained throughout their thickness.

Non-porous homogeneous mixtures of polyester and/or acrylic alloys with fillers

A surface material that looks like stone, textured or glass material, but is cut like wood

A material with a pattern throughout its thickness that can be 3-D formed and is renewable

Solid Surface for bar, restaurant and kitchen worktops has successfully replaced granite, marble, tiles, plywood and even glass in kitchens, offices, retail shops, healthcare, shopping malls and homes.

Seamless connection and design flexibility

A huge advantage of Solid Surface compared to Stone is that it connects seamlessly, which means no unsightly connections. Solid Surface offers greater design flexibility and enables us to create new designs with the shape and thickness that best meet your requirements.

Hygienic and stain resistant

The non-porous nature of the Solid Surface means that it is highly resistant to contamination. It eliminates the build-up of bacteria and dirt, resulting in the most hygienic worktop surface possible. It is the material of choice in commercial food service areas and hospitals.

Renewable

The combination of seamless connections and non-porous features throughout its thickness makes it easy to restore Solid Surface desktops to like-new condition. In the unlikely event of an accident, repairs can easily be carried out without having to dismantle the entire tabletop.

Benefits of Solid Surface

Seamless joints

Smooth to the touch

No holes

Heat resistant up to 180 ° C

Resistant to household goods and stains

Hygienic and durable

Cut into any shape

No resealing or sanding required

Robust surfaces are easy to manufacture and install

High toughness and high oxygen index

Easy to maintain - no scaling, scrubbing or oiling required!

Low water absorption

Finishing

Solid surface features:

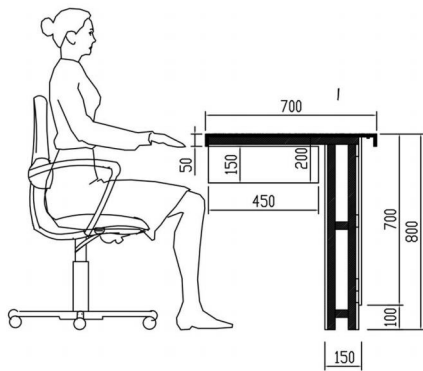

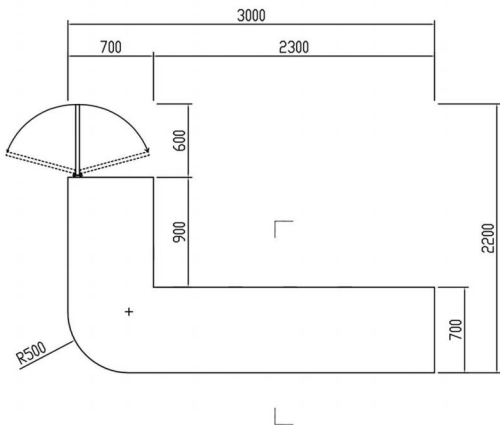

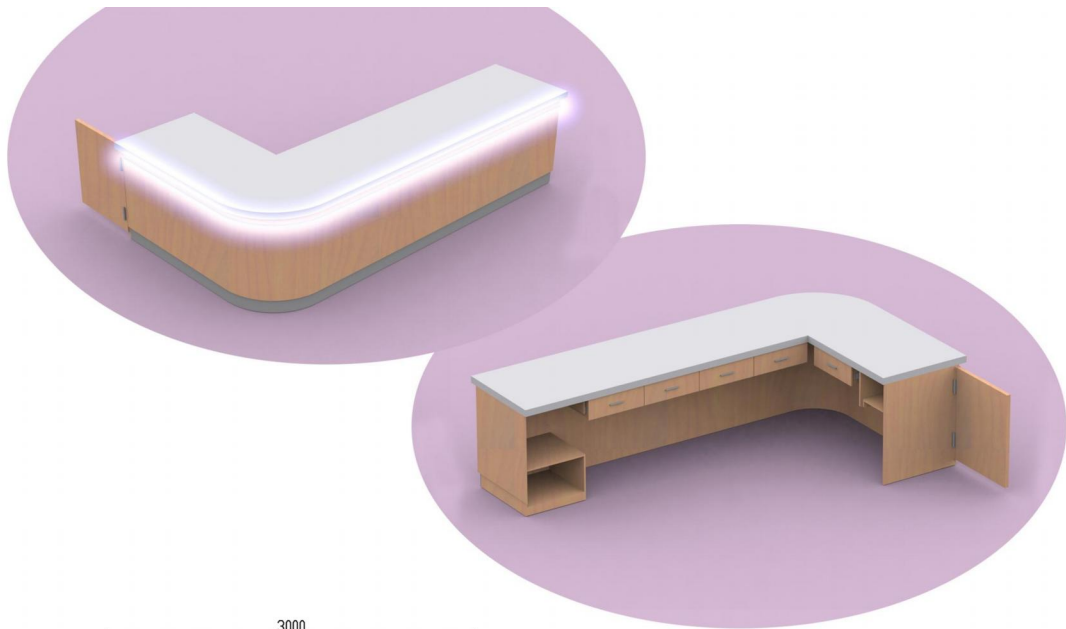

- * Joint invisible, more beautiful appearance
- * No bubbles, anti-pollution, clear more convenient
- * High tenacity & easily repairable;
- * Smooth, solid, inconspicuous seams;
- * Superior stain/bacteria/chemical resistance
- * Very low water absorption & excellent penetrability;
- * Very high oxygen index & flame resistant;
- * Warm touch, colorful and beautiful.
- * Extremely durable and easy to maintain and repair

High quality Raw Materials

All of our materials from famous brand, with high quality material, such as DuPont Ti-pure , LG PMMA, and best Aluminum hydroxide in China, best raw material prove best quality product

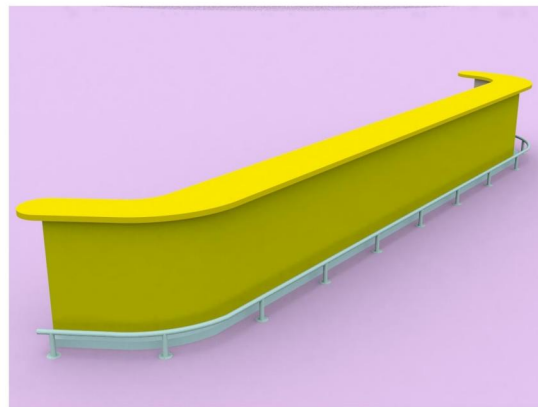

Accept customised services, provide professional construction drawings and renderings
